

THE ENVIRONMENTALLY FRIENDLY SEED BED PREPARATION TOOL

It's not surprising the Great Plains Series II Turbo Till is a favorite with Mid-Atlantic farmers. The most versatile vertical tillage machine is also the most cost-effective solution to achieve more uniform soil density and increased crop yields. An accepted conservation machine, the Series II Turbo Till has patented coulters that chop residue without hair pinning. The Series II Turbo Till also features a narrow hitch, standard wing gang weights, heavier transport components, and folding models incorporate a special hydraulic weight transfer system to ensure even tillage depth across the entire width of the machine.

- Ideal in the Fall for managing residue and reducing compaction or in the Spring to expose soil and enhance seedbed warming
- Great for No-Till farmers when fields are too soggy to plant or when planters cannot penetrate hard soil
- Min-Till/Conventional Farmers use the Turbo Till for leveling and smoothing ground that was previously deep-tilled and for Spring seedbed preparation
- Individually mounted coulters available

GREAT PLAINS SERIES II TURBO TILL MODELS

| MODEL | SIZE |
|--------|------|
| TT1200 | 12' |
| TT1500 | 15' |
| TT1800 | 18' |
| TT2400 | 24' |
